Authorization for this examiner's amendment was given in a telephone interview with Janet D. Hood (Reg. No. 61,142) on February 4, 2010.

The application has been amended as follows:

*In the Specification:*

[0001] This application is the US National Stage of International Application No. PCT/EP2004/010349, filed September 15, 2004, and published as WO 2005/037483 A1, and claims benefit thereof. The International Application claims the benefits of European Application No. EP 03022634.4, filed October 6, 2003, both of these applications are incorporated by reference herein in their entirety.

Art Unit: 1792

*In the Claims:*

1-21. (cancelled)

22. (currently amended) A method for producing a layer system on a component, comprising[[:]]:

providing a substrate ~~that comprises~~ including a recess;

filling the recess with a first material ~~that includes~~ and an agent for reducing the melting point of the first material;

forming a local coating by applying a second, metallic material comprising a metallic material in the region of the filled recess by an intermediate removal heat treatment forming a local coating,

performing a removal heat treatment during which the second, metallic material reacts with the agent for reducing the melting point of the first material, thereby extracting said agent;

covering the region of the filled recess with a base coating, ~~the base coating~~ comprising [[a]] MCrAlX alloy[[,]];

~~wherein the agent adversely affects a property of the base coating if the agent diffuses into the base coating thereby making the agent undesirable; and~~

Art Unit: 1792

~~wherein during the removal heat treatment the second material reacts with the first material and extract~~[[s]]ing the undesirable agent ~~of the first material to~~ inhibits ~~[[a]]~~ diffusion of the ~~undesirable~~ agent into the base coating;

wherein M is an element selected from the group consisting of: iron, cobalt, and nickel; and

wherein X is yttrium or a rare earth element.

23. (currently amended) The method as claimed in claim 22, wherein the second, metallic material covers the ~~undesirable~~ agent for reducing the melting point of the first material in the recess and functions as a diffusion barrier.

24. (currently amended) The method as claimed in claim 22, wherein, after the removal heat treatment and prior to applying the base coating, the second, metallic material and the extracted agent are ~~[[is]]~~ removed together by grinding ~~with the undesirable extracted agent which has been removed from the first material after the removal heat treatment and prior to the coating of the substrate by a grinding treatment.~~

Art Unit: 1792

25. (currently amended) The method as claimed in claim 22, wherein the first material is a solder ~~which contains the agent for reducing the melting point of the first material.~~

26. (currently amended) The method as claimed in claim 22, wherein the agent for reducing the melting point of the first material is boron or a boron-containing compound.

27. (currently amended) The method as claimed in claim 2[[2]]5, ~~wherein~~ further comprising a soldering heat treatment ~~is carried out using~~ to bond the first material solder to the substrate in the recess prior to ~~an application of~~ forming the local coating ~~so that the first material bonds to the substrate in the recess.~~

28. (currently amended) The method as claimed in claim 2[[2]]7, wherein the removal heat treatment is performed either simultaneously with the soldering heat treatment or as a separate diffusion heat treatment ~~or the soldering heat treatment.~~

29. (currently amended) The method as claimed in claim 22, wherein the substrate is an iron-based superalloy, a nickel-

Art Unit: 1792

based superalloy, ~~[[or]]~~ a cobalt-based superalloy, or a ceramic.

30. (cancelled)

31. (currently amended) The method as claimed in claim 22, wherein a thickness of the local coating ~~with the second material~~ is thinner than the base coating ~~of the component~~.

32. (cancelled)

33. (currently amended) The method as claimed in claim 22, wherein the second, metallic material is chromium.

34. (cancelled)

35. (currently amended) The method as claimed in claim 22, wherein the second, metallic material is applied ~~[[using]]~~ in the form of a paste, a slurry, or a tape.

36. (currently amended) The method as claimed in claim 22, wherein the ~~component~~ substrate is a turbine component of a gas turbine or a steam turbine.

37. (currently amended) The method as claimed in claim 22, wherein the first material is a multi-component material.

38-41. (cancelled)

42. (currently amended) The method as claimed in claim 22, wherein the second, metallic material is a chromium-containing compound.

43. (currently amended) The method as claimed in claim 22, wherein the second, metallic material is a chromium-containing alloy.

2. Claims 22-29, 31, 33, 35-37, 42, and 43, are allowed.

3. The following is an examiner's statement of reasons for allowance: The reasons for allowance remain the same as set forth in the prior Office action.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 1792

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 2,735,155 A teaches that it is known to remove impurities from boron-containing compounds by heating.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Fletcher III whose telephone number is (571) 272-1419. The examiner can normally be reached on Sunday, 5:00 AM - 12:00 PM and Monday through Friday, 5:00 AM - 3:30 PM.
